Cybersecurity Overview

CyberQP is making Privileged Access Management easy for Managed Service Providers.

CyberQP

When MSPs manage multiple client admin accounts like O365 tenants, service accounts, or local admin accounts, it's difficult to regularly change the passwords to secure sensitive data. Moreover, this forces technicians to share or reuse passwords.

And today, MSPs will often have to pause important jobs in their workflow to answer password reset tickets and get locked-out clients back online as quickly as possible. Even worse, it's difficult for technicians to truly verify that a caller is who they claim to be, especially as a client scales their operations.

That's why CyberQP believes in offering an MSP-centric approach to Privileged Access Management. Streamline your MSP's helpdesk by removing password reset tickets and easily rotate your most important admin passwords to mitigate the risk on your attack surfaces, all through one intuitive dashboard.

Introducing Our Products

CyberQP's Privileged Access Management suite empowers MSPs like you to offer multi-tenant protection of critical admin and service accounts for your clients and your team. We also give you the ability to eliminate password reset tickets entirely and remove the challenges of identity verification with just one click.

End User Identity Verification
Self-Service Password Reset
Centralized Account Management
Office 365 Password Sync
Multi-tenancy
Integrations with popular MSP tools

Cybersecurity Overview

CyberQP Cybersecurity is making Privileged Access Management easy for Managed Service Providers.

QGuard

QGuard empowers our MSP Partners to automate the management of their privileged accounts, internally and across your end users. You can set up recurring password rotations on administrator accounts and control the frequency right from your CyberQP dashboard.

QGuard allows MSPs to manage a variety of admin accounts, including local administrator accounts, service accounts and Azure Active Directory (O365) accounts through easy-to-deploy agents and cloud integrations.

At CyberQP, we want MSPs to have a cybersecurity company you can trust to safeguard your passwords. That's why you can QGuard to write passwords back to either our secure vault or the vaults built into your documentation tools, like IT Glue or Hudu.

QDesk

QDesk cuts password reset requests out of your ticketing system to let you focus on the work that matters. MSP clients can now leverage self-service password resets using the CyberQP mobile app using built in biometrics, like Face ID or fingerprint.

In addition to automating the resets, QDesk writes passwords back to both Azure AD (Office 365) and Active Directory, effectively syncing passwords for your end users.

CyberQP makes it easy to verify your end user's identity from within your PSA. Our verification platform allows end users to verify their identity through several methods, including the CyberQP app, text message and email notifications.

Our Integrations

MSPs need solutions that will integrate seamlessly with their administrator and service accounts. CyberQP gives you a centralized dashboard to simplify the management of critical accounts. We already integrate with many major tools in the MSP market, and our integration library is continuing to grow. Reach out to us to see if we integrate with your tools.

Microsoft Active Directory   Office 365   Azure Active Directory   Local Accounts   Microsoft Hyper-V

Cybersecurity Overview

CyberQP is making Privileged Access Management easy for Managed Service Providers.

CyberQP

At CyberQP, we're dedicated to creating channel-focused solutions that protect your most privileged accounts. We work exclusively with MSPs to help them offer secure and convenient tools to manage their privileged accounts and keep their critical data safe.

But it's not enough to just give you the easy-to-deploy software and dashboard that you need. Privileged Access Management is difficult to explain to your clients and prospective stakeholders.

That's why our Partner Program is designed to help you market and sell your products with dedicated resources, training, datasheets and co-brandable assets. We offer both self-service options and personalized sales and marketing support to help you go to market.
