

# QVerify

BUILD A ZERO TRUST HELP DESK WITH END USER IDENTITY VERIFICATION

## Today's threat actors continue targeting MSPs and help desks with impersonation attempts, phishing, and vishing attacks.

QVerify is an End User Identity Verification solution for Managed Service Providers (MSPs) and help desks. Help desks using QVerify can proactively address cyber criminals that utilize social engineering techniques or impersonation attacks.

QVerify allows service delivery managers and MSP owners to create an offering with multiple ways to verify, including SMS and email.

# 64%

of cyber attacks observed by MDR analysts were identity-based threats.

Expel Annual Threat Report 2024

## KEY BENEFITS

### PREVENT SOCIAL ENGINEERING & IMPERSONATION ATTACKS

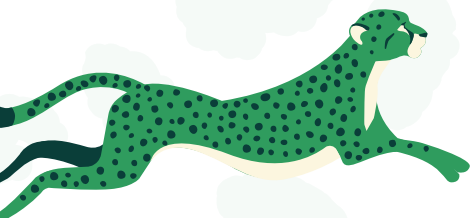

Standardize identity verification and deter threat actors who will try to bypass your defenses and get unauthorized support or information.

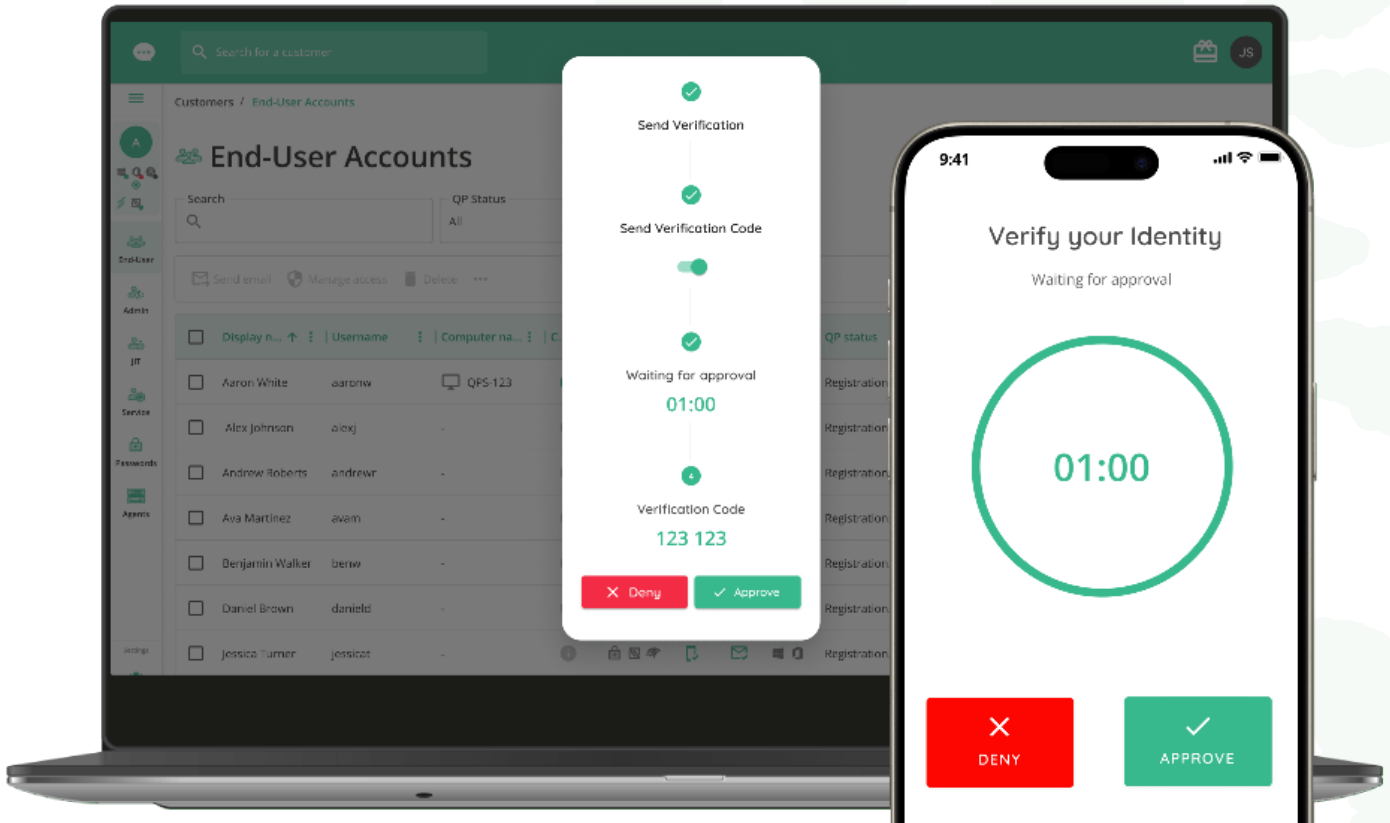

### ENHANCE HELP DESK ACCOUNTABILITY

Modernize legacy identity verification processes, such as manually calling back everyone who calls in for support. Review technician activity with using QVerify's automated audit logs.

### BUILD A ZERO TRUST HELP DESK

QVerify enables you to begin laying the foundations to build a Zero Trust Help Desk and prevent social engineering attacks, backed by CyberQP, your team's SOC 2 Type 2-certified cybersecurity partner.

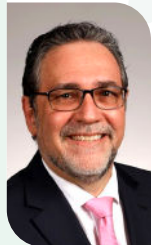

## Fortify Your Technicians Against Impersonators and Social Engineers

CyberQP gives its partners a trusted identity security partner to help protect their technicians and end users.

### Use Multiple Secure Authentication Methods

Verify through communication channels that your end users know (Email and SMS) with co-brandable verification messaging.

### See Why Managed Service Providers Love QVerify

*I can sleep better at night because everyone who calls for support has to identify themselves.*
